

OPEN ENDED PROJECT ON OOPS(C++)

Trip Advisor & Planner

**Information Science &
Engineering**

PAWAN KUMAR GANJHU

PALLAVI PRATIK

SHUBHAM MISHRA

CERTIFICATION

This is to certify that **PAWAN KUMAR GANJHU, PALLAVI PRATIK and SHUBHAM MISHRA**, students of Information Science and Engineering of **SIDDANGANGA INSTITUTE OF TECHNOLOGY**, semester IV, have satisfactorily completed the required project work on **OBJECT ORIENTED PROGRAMMING, C++**.

ACKNOWLEDGEMENT

We Selected this project as a part of our studies, titled “TRIP ADVISOR AND PLANNER.” As gratitude, we convey our sincere thanks to our Object Oriented Programming professor **SHUBHA C.** who was the constant guide during the period of study and without whose help it would not have been possible for us to complete this project.

Again we take this opportunity to express our profound gratitude and deep regards to our professors for their exemplary guidance, monitoring and constant encouragement throughout the course of this thesis. The blessing, help and guidance given by them time to time shall carry us a long way in the journey of life on which we are about to embark.

Lastly, I thank almighty, my teachers, parents, and friends for their constant encouragement without which this assignment would not be possible.

PAWAN KUMAR GANJHU – 1SI14IS029

PALLAVI PRATIK – 1SI14IS028

SHUBHAM MISHRA – 1SI14IS046

DEPARTMENT OF I.S.E.

SEMESTER 4th

OBJECTIVE

To develop a C++ project to manage a TRIP ADVISOR & PLANNER service using object oriented programming and data file handling.

Now a day every traveling agency manager has need to maintaining customer details. For this purpose, need the software which could easily and conveniently maintain the customer details.

The record of customer can be stored in the single file. This software can be used in several traveling agencies for keeping the records of the customer and also used to add record of school trip, government officer Holiday, family trip and large industries traveling record.

This project “**traveling agency**” includes some facilities of travel such as registration, search, display, modification, delete etc.

This software searches the client data which is store in the record. The software used for arranging travel services, provide new and improved services, and identify travel related cost savings

The C++ programming language was developed at AT&T Bell laboratories in the early 80's by **Bjarne Stroustrup**. He found out "C" lacking for simulating and decided to extend the language by adding features from his favourite language. SimtaSj was one of the earliest object-oriented languages. Bjarne Stroustrup called it "C with classes" originally. The name C++ was coined by Rick Mascitti where "++" is the C increment operator. Ever since its birth, C++ evolved to cope with problems encountered by users, and through discussions at AT&T.

The major reasons for its success is the support for object oriented programming, which is most near to real world situations.

However, the maturation of the C++ language is attested by 2 recent events:-

- The formation of an ANSI (American National Standard Institute) C++ committee, and
- The publication of the Annotated C++ Reference Manual by Ellis and Stroustrup. One can easily judge the importance of C++ as given the following lines:-

"Object-oriented technology is regarded as the ultimate paradigm for the modeling of the information in the data of logic. The C++ is now shown to fulfill this goal".

This is a project based on train reservation. The program

helps us to **enter, display or alter the details of different trains.**

Moreover & most importantly the program helps us to **reserve or cancel a train ticket.**

The program also helps us to know **the present status** of a reserved ticket, i.e. whether the ticket is **confirmed or not.** It includes various function programs to do the above mentioned tasks.

✨ **BASIC CONCEPTS OF OOP**

The object oriented programming has been developed with a view to overcome the drawbacks of conventional programming approaches. The OOP approach is based on certain concepts that help it attain its goals of overcoming the drawbacks or shortcomings of conventional programming approaches. These general concepts of OOP are given below:-

→ **DATA ABSTRACTION:-**

Abstraction is the concept of simplifying a real world concept into its essential elements.

“Abstraction refers to the act of representing essential features without including the background details or explanation.”

→ENCAPULATION:-

Encapsulation is the most fundamental concept of OOP. It is the way of combining both data and the functions that operate on that data under a single unit.

“The wrapping up of data and operations / functions into a single unit is known as encapsulation.”

→MODULARITY:-

The act of partitioning a program into individual components is called modularity. The justification for partitioning is that, it reduces its complexity to some degree and it creates a number of well-defined, documented boundaries within the program.

“Modularity is the property of a system that has been decomposed into a set of cohesive and loosely coupled modules.”

→INHERITANCE:-

“Inheritance is the capacity of one class of things to derive capabilities or properties from another class.”

→POLYMORPHISM:-

Polymorphism is key to the power of object oriented programming. It is so important that languages that don't

support polymorphism cannot advertise themselves as OO languages.

“Polymorphism is the ability for a message or data to be processed in more than one form.”

✧ DATA FILE HANDLING

Data file handling has been effectively used in the program.

This program uses the concept of **object-oriented programming** and **data file handling**.

The database is a collection of interrelated data to serve multiple applications. That is database programs create files of information. So we see that files are worked with most, inside the program.

✧ DBMS

The software required for the management of data is called as DBMS. It has 3 models

1. Relation model
2. Hierarchical model
3. Network model

→ RELATIONAL MODEL

It's based on the concept on relation. Relation is the table that consists of rows and columns. The rows of the table are called tuple and the columns of the table are called attribute. Numbers of rows in the table is called as cardinality. Number of columns in the table is called as degree.

→ **HIERARCHICAL MODEL**

In this type of model, we have multiple records for each record. A particular record has one parent record. No child record can exist without parent record. In this, the records are organized in tree (like structure).

→ **NETWORK MODEL:-**

In this, the data is represented by collection of records and relationship is represented by (link or association).

CHARACTERISTICS OF DBMS: -

- i. It reduces the redundancy
- ii. Reduction of data inconsistency
- iii. Data sharing
- iv. Data standardization

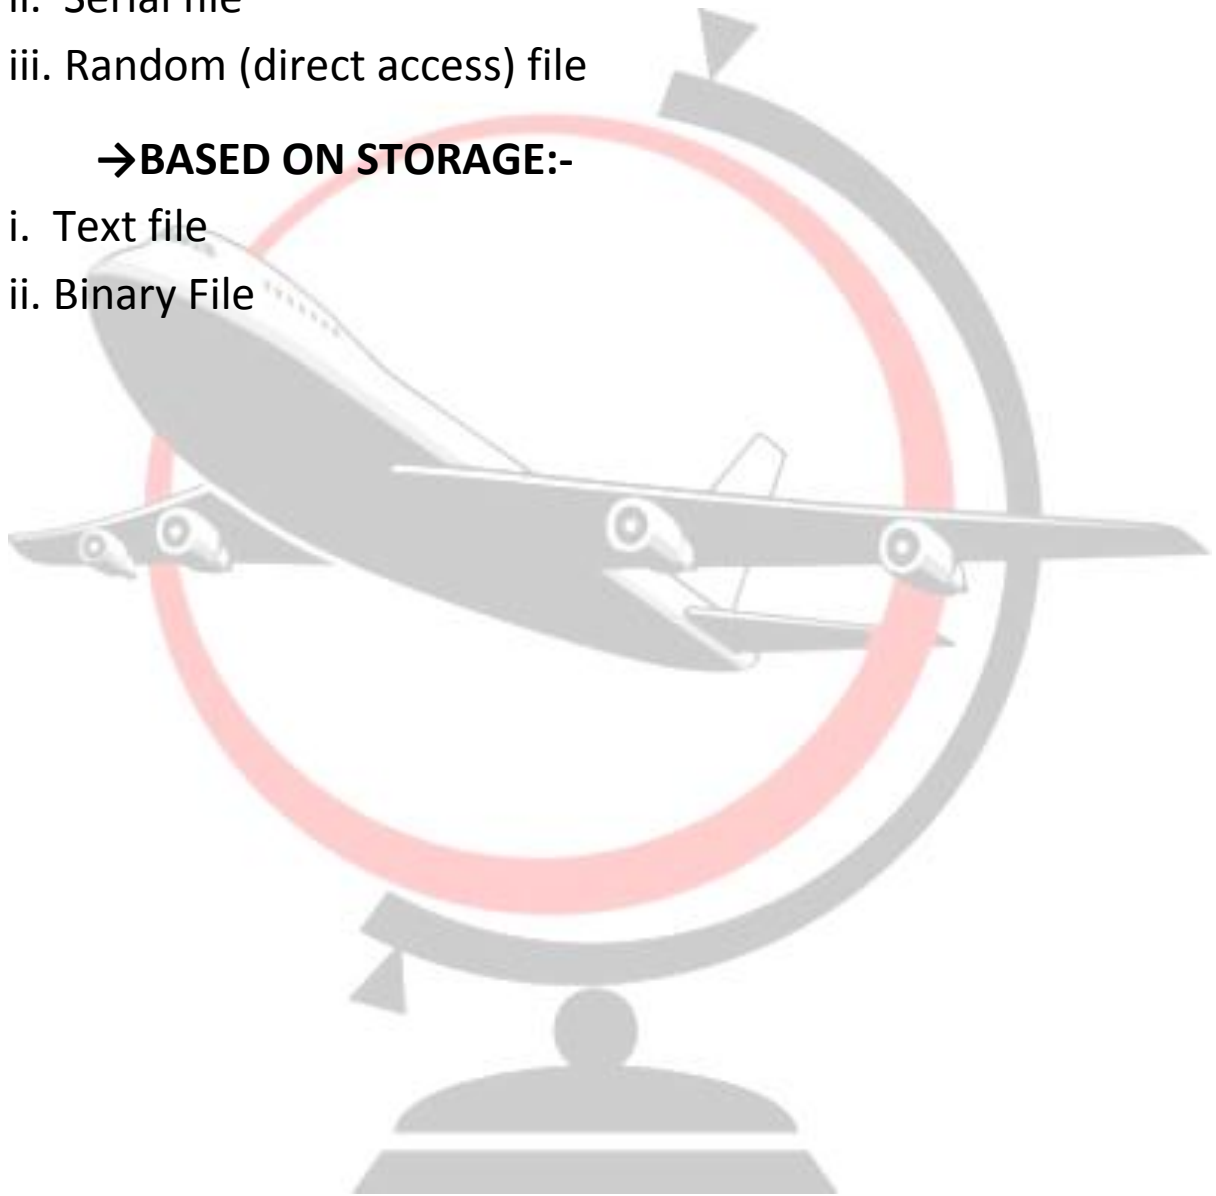

DIFFERENT TYPES OF FILE

→BASED ON ACCESS:-

- i. Sequential file
- ii. Serial file
- iii. Random (direct access) file

→BASED ON STORAGE:-

- i. Text file
- ii. Binary File

REQUIREMENT TO RUN THE SOFTWARE

HARDWARE AND SOFTWARE REQUIRED

All this suggest that the choice of a **computer 486** or equivalent with about **250 MB Hard Disk** and about **8 to 16 MB RAM**, a line **printer** or a dot matrix printer and preferable a laser printer is optimum. The availability of sophisticated programming tool is imperative and thus a **C++** is chosen to program the system.

Having done this the next step is to carefully analyze the data, identity processing element and design appropriate data base file.

PROBLEM DESCRIPTION

REQUIREMENT ANALYSIS

We have studied the existing system in details. The finding of our study yields various pieces of information which are described in the following manner. For the **TRAVELING AGENCY OR TRIP ADVISOR AND PLANER** and with other related modules of **RESERVATION OR BOOKINGS**, we enter all the following details.....

1. Book hotels, vehivles
2. Display details of bookings
3. Alter booking records
4. Avert booked records
5. Display of places and names of sight seeing
6. Search for an entered record
7. Details of the customer

SYSTEM SPECIFICATION

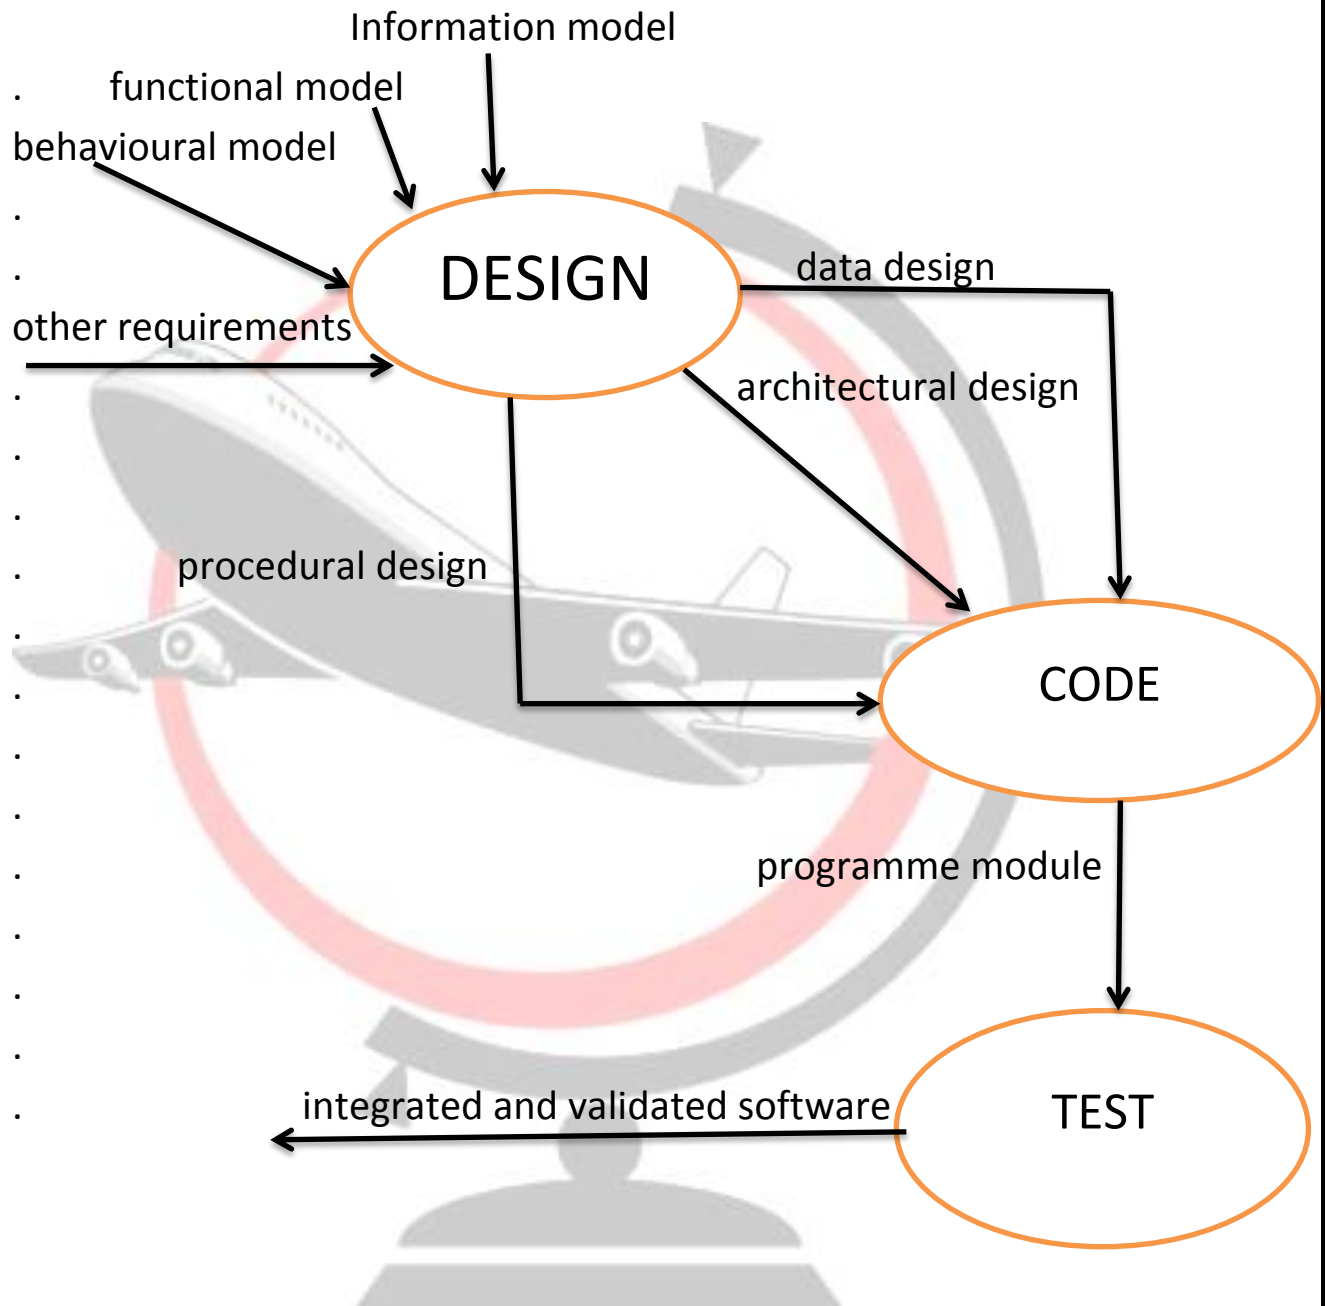

SYSTEM DESIGN

The importance of software design can be stated with a single word quality. Design is the place where quality is fostered in software development. Design provides us with representations of software engineering and maintenance steps that follow.

System design sits at the technical kernel of the software engineering process and is applied regardless of the development paradigm that is used. Once software requirements have been analyzed and specified, the software design is first of the three, technical activities- 'design', 'code', and 'test', that are required to program the software.

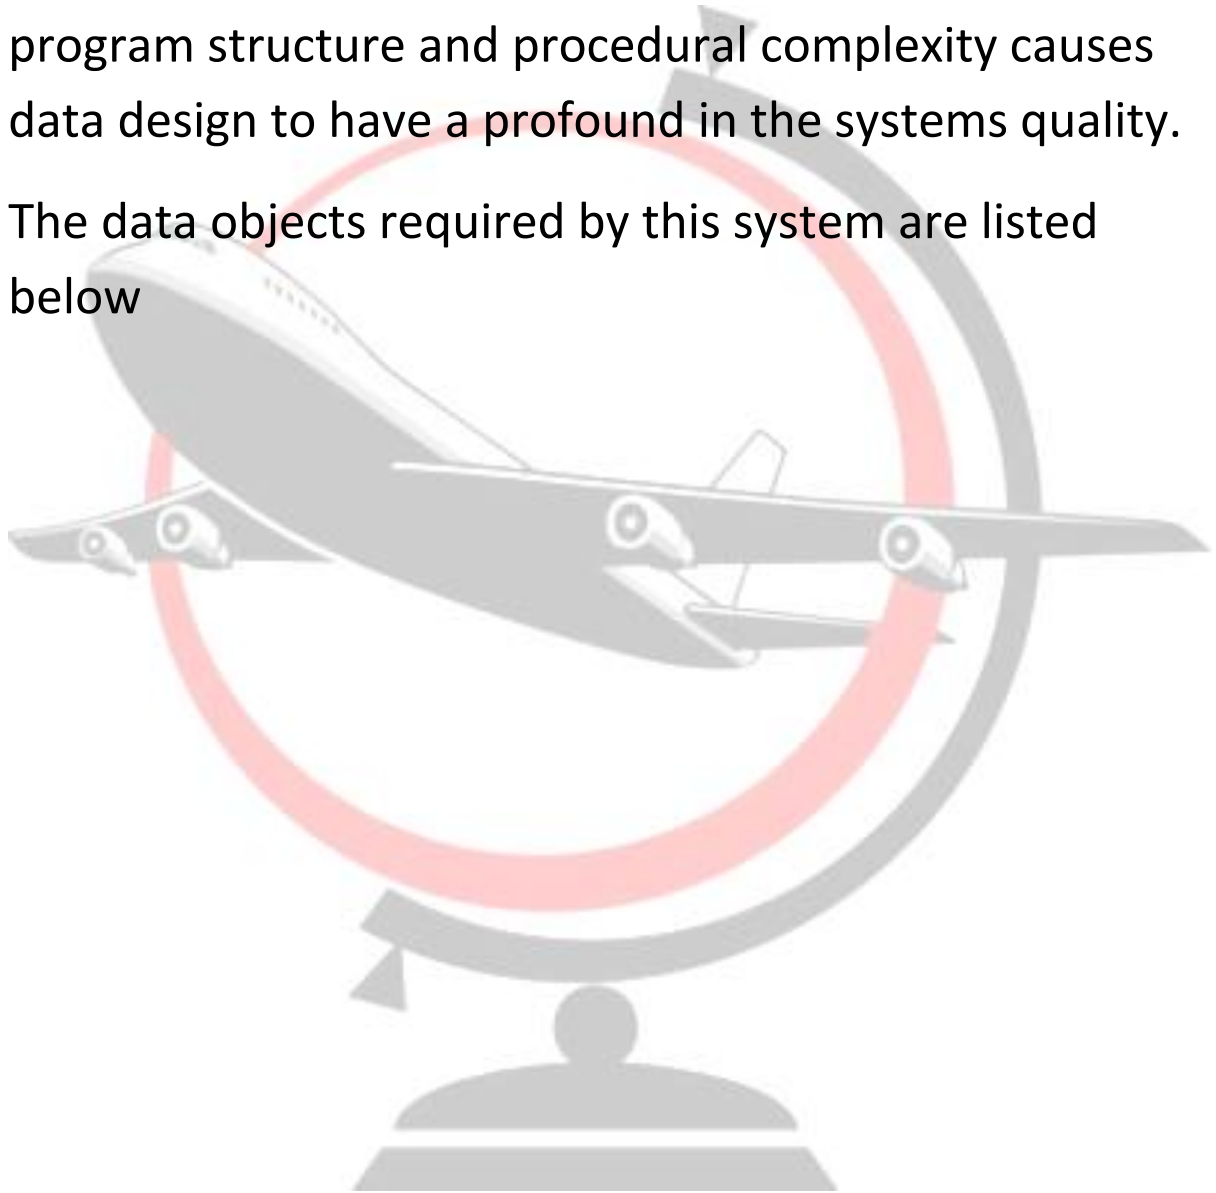

The flow of information during this technical phase of the software engineering process is illustrated in the figure given below:

FLOW CHART

DATA DESIGN

Data design is the first of the three design activities that are conducted during system development. The impact if data structure on program structure and procedural complexity causes data design to have a profound in the systems quality. The data objects required by this system are listed below

DATA DICTIONARY & FILE DESIGN STRUCTURE

S.NO.	DATA TYPES	VARIABLE NAME	DESCRIPTION
int main()			
1	char	ch	To i/p choice
Class transport			
1	char []	address	Address of the customer
2	Char[]	destination	Places to go
3	Int	No_of_passengers	No of passengers
4	Float	Price	Advanced payment
5	Char	Vehicle	Name of vehicle
6	char	Name	Name of the customer
Class hotel			
1	Char[]	Hot_name	Name of the hotel
2	Char[]	Address	Address of customer
3	Char[]	Destination	Place to go
4	Int	No_of_days_stay	Days to stay in hotel
5	Float	Price	Advanced payment
6	Char[]	Name	Name of the customer
Void create_transport()			
1	char	Ch	i/p choice

Void display_transport()			
1	Int		Record number
Void search_transport()			
1	Int	flag	Status of searching
2	Char[]	name	Name to be searched
Void modify_transport()			
1	Int	flag	Status of record present
2	Char[]	name	Name of customer
Void create_hotel()			
1	char	ch	i/p choice
Void display_hotel()			
1	Int	i	Record number
Void search_hotel()			
1	Int	Flag	Status of flag
2	Char[]	Name	Name to be searched
Void modify_hotel()			
1	Int	flag	Status of presence
2	Char[]	nam	Name to be modified

HEADER FILES

1. FSTREAM.H – for file handling, cin and cout

Declares the C++ stream classes that support file input and output. Replaces the older, now outdated STDIOSTR.H.

2. CONIO.H – for clrscr () and getch () functions

3. STDIO.H – for standard I/O operations

4. STRING.H – for string handling

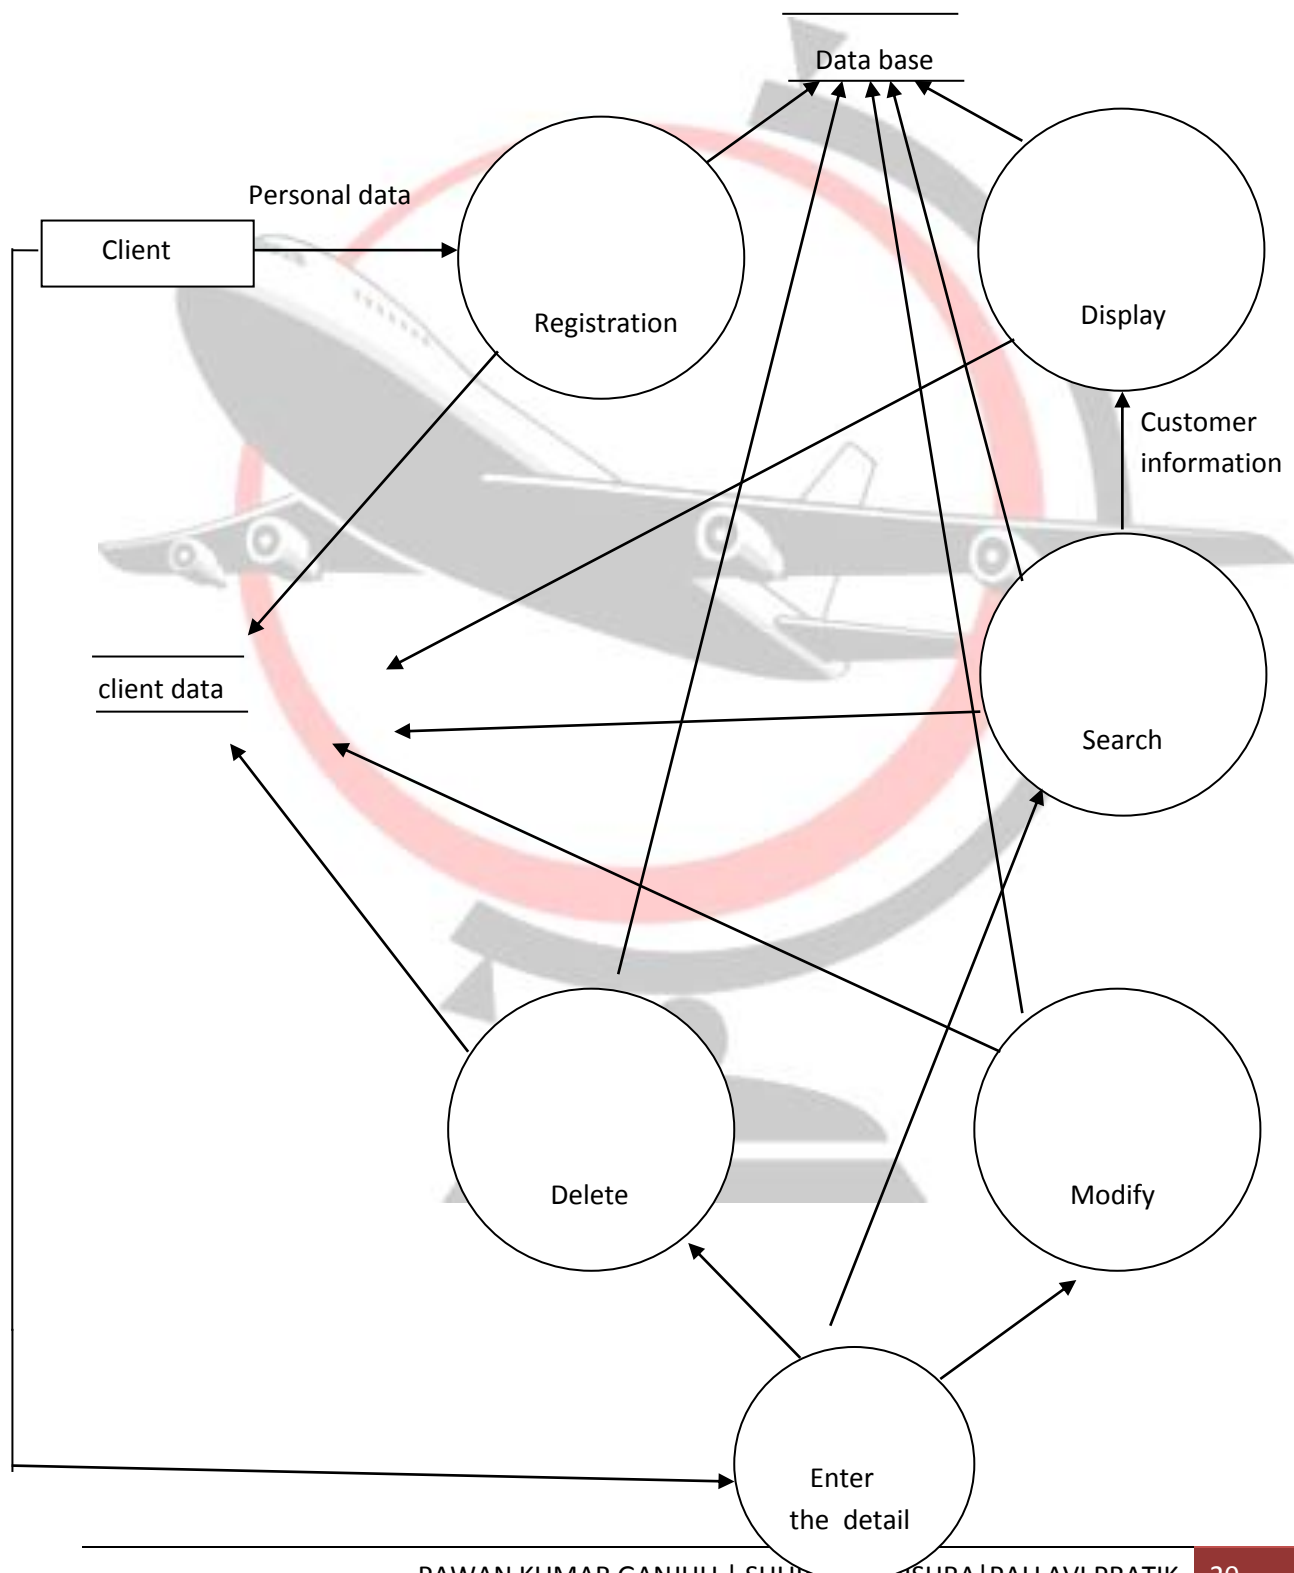

5. STDLIB.H – for handling abs, exit functions

6. IOMANIP.H – Declares the C++ streams I/O manipulators and contains macros for creating parameterized manipulators.

7. IOSTREAM.H – for handling cin and cout

FLOW DIAGRAM

DATA FLOW DIGRAM

ADVANTAGES OF THE PROGRAM

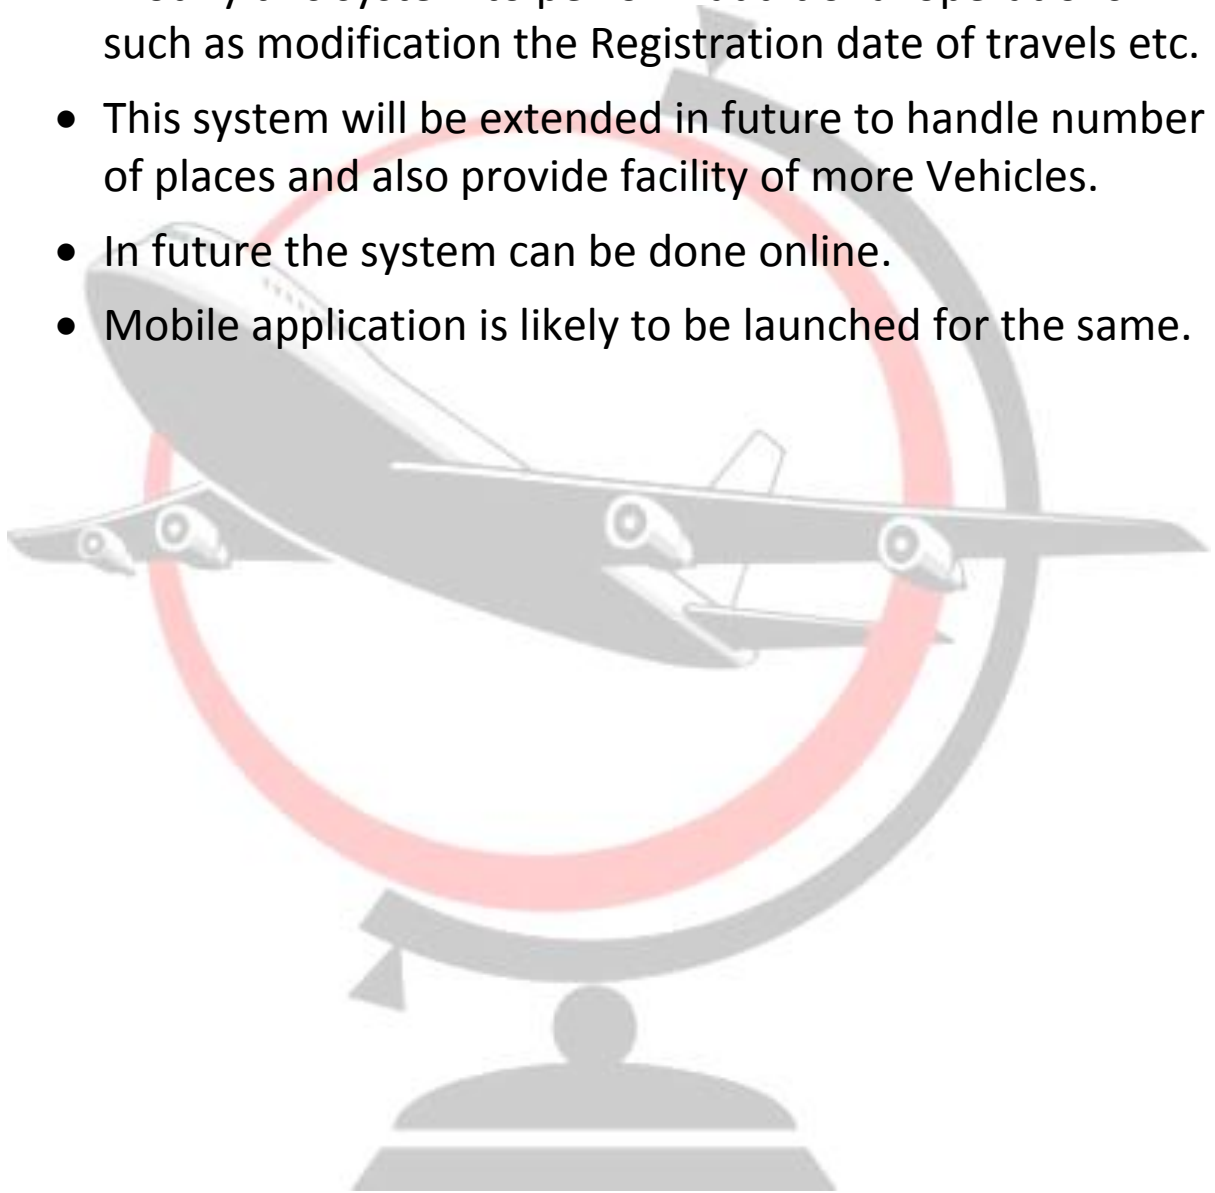

- 
- 1) Customer does not have to wait in long queues.
 - 2) Customer does not need to worry about buying tickets and booking hotels.
 - 3) This software reduces paper work.
 - 4) It is easy to handle customer's record.
 - 5) This software saves the time.
 - 6) Information of the customer stores permanently.

DISADVANTAGES OF THE PROGRAM

- 1) This system is suitable for only few places.
- 2) This system is suitable for only four vehicles types.
- 3) Online facility is not available.

FUTURE SCOPE

- Modify this system to perform additional operations such as modification the Registration date of travels etc.
- This system will be extended in future to handle number of places and also provide facility of more Vehicles.
- In future the system can be done online.
- Mobile application is likely to be launched for the same.

CONCLUSIONS

This software is efficient in maintaining customer's details and can easily perform operations on customer's records. This software also reduces the work load of the travel agency manager.

In future, this system can launch web site for easy online registration. In this system there is limitation for places and vehicles. In future, it can be extended to add more place and vehicles.
